Request a Prior Art Search

Search requests relating to published applications, patent families, and litigation may be submitted by filling out this form and clicking on "Send."

For all other search requests, fill out the form, print, and submit the printout with any attachments to the STIC facility serving your Technology Center.

Provide detailed information on your search topic:

- In your own words, describe in detail the concepts or subjects you want us to search.
- Include synonyms, keywords, and acronyms. Define terms that have special meanings.
- ***For Chemical Structure Searches Only***
Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers
- ***For Sequence Searches Only***
Include all pertinent information (parent, child, divisional, or issued patent numbers) along with

the appropriate serial number.

- ***For Foreign Patent Family Searches Only***
Include the country name and patent number.
- Provide examples or give us relevant citations, authors, etc., if known.
- FAX or send the **abstract, pertinent claims** (not all of the claims), **drawings, or chemical structures** to your EIC or branch library.

Invention may be some kind of [protocol convertor?] for enabling use of different protocols between a telephony switch and voice processing device. Also may include a [buffer] for [timing] the sending and receiving of voice data to and from the switch (see the claims below). Description refers to many multiplexing terms/phrases...frame synchronization, TDM (time division multiplexing), clock signal rate, clock polarity, time slots, time slots per frame.

Abstract:

An interface device and a method according to the invention interfaces between a user (which may be a telephony voice processing computer?) and a voice switch according to programming parameters. The invention relates generally to devices and methods of transmitting voice data between a switch and a computer system, such as those found in telephony systems. Existing means of transmitting voice data between a switch and a computer system require a communication device that is designed to facilitate communications with one type of switch operating on a switch protocol, and one type of computer system operating on a computer system protocol. If either the switch protocol or the computer system protocol, or both, are changed, the communication device must also be changed.

Pertinent Claims:

Special Instructions and Other Comments:

(For fastest service, let us know the best times to contact you, in case the searcher needs further clarification on your search.)

Applicaition appears to be mis-classified in telephony class 379/67.1 (vocie messaging) and likely belongs in class 370 (multiplexing). best time to contanct via phone m-f between 10 and 4, best contact via email.

Press ALT + F, then P to print this screen for your own information.
